Cyto-Tek® 2500 Cytocentrifuge

The Cyto-Tek® 2500 Cytocentrifuge provides optimal cell recovery and advanced preservation of cellular structures in non-gynaecological monolayer slide preparations.

This Cyto-Tek 2500 was designed with enhanced features focusing on user safety such as the introduction of a sealable rotor housing with lockable lid to significantly reduce aerosol exposure. The housing is completely removable and

transportable, providing added convenience. Technicians now have the ability to load and unload specimens in vented areas away from the centrifuge, under a fume hood.

The Cytocentrifuge has a sleek and modern design and provides consistent performance that clinical laboratories have come to expect from Sakura Finetek.
