

Freedom of efficiency - the success of Dr. Weiß

Dr. Weiß recalls the early days of his career as a pathologist. Long days and often late nights of hard work; an undesired situation to anyone that has a family and hobbies.

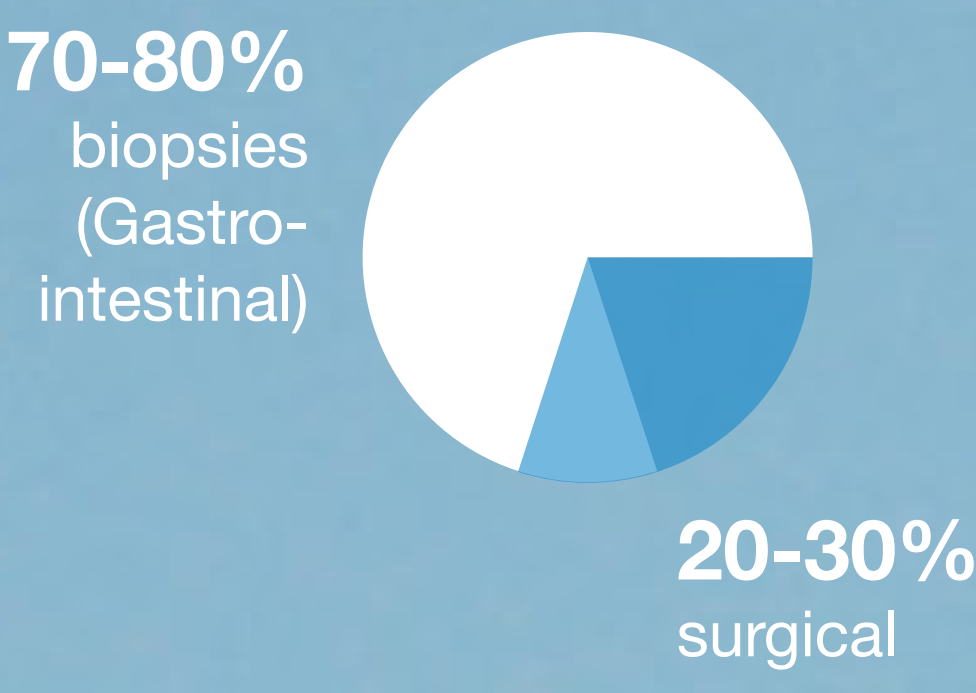

With the number of available qualified staff dropping, this was the moment that Dr. Weiß expressed his vision and started to optimise his laboratory radically. He needed something that would help him to achieve his dreams: to make his laboratory successful, efficient and more human.

Sakura's SMART Automation enabled Dr. Weiß to automate time-consuming processes and improve the efficiency and the quality of the results. This resulted in a true benchmark for the histology world. We are proud to present his achievements.

Yearly volume

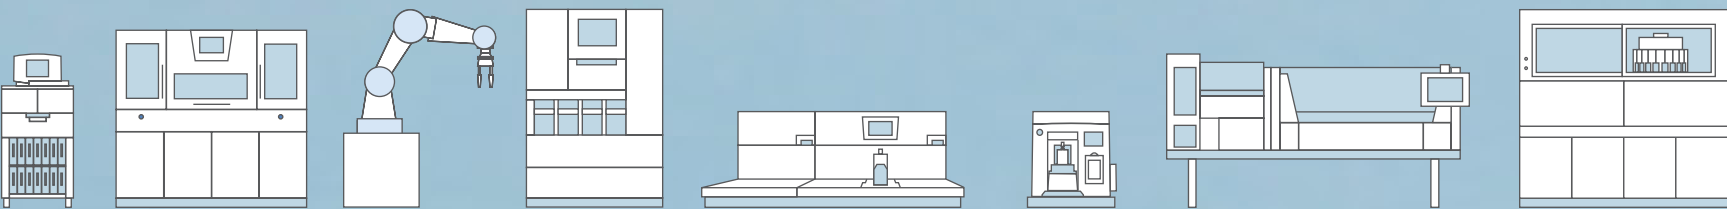

Type of tissue

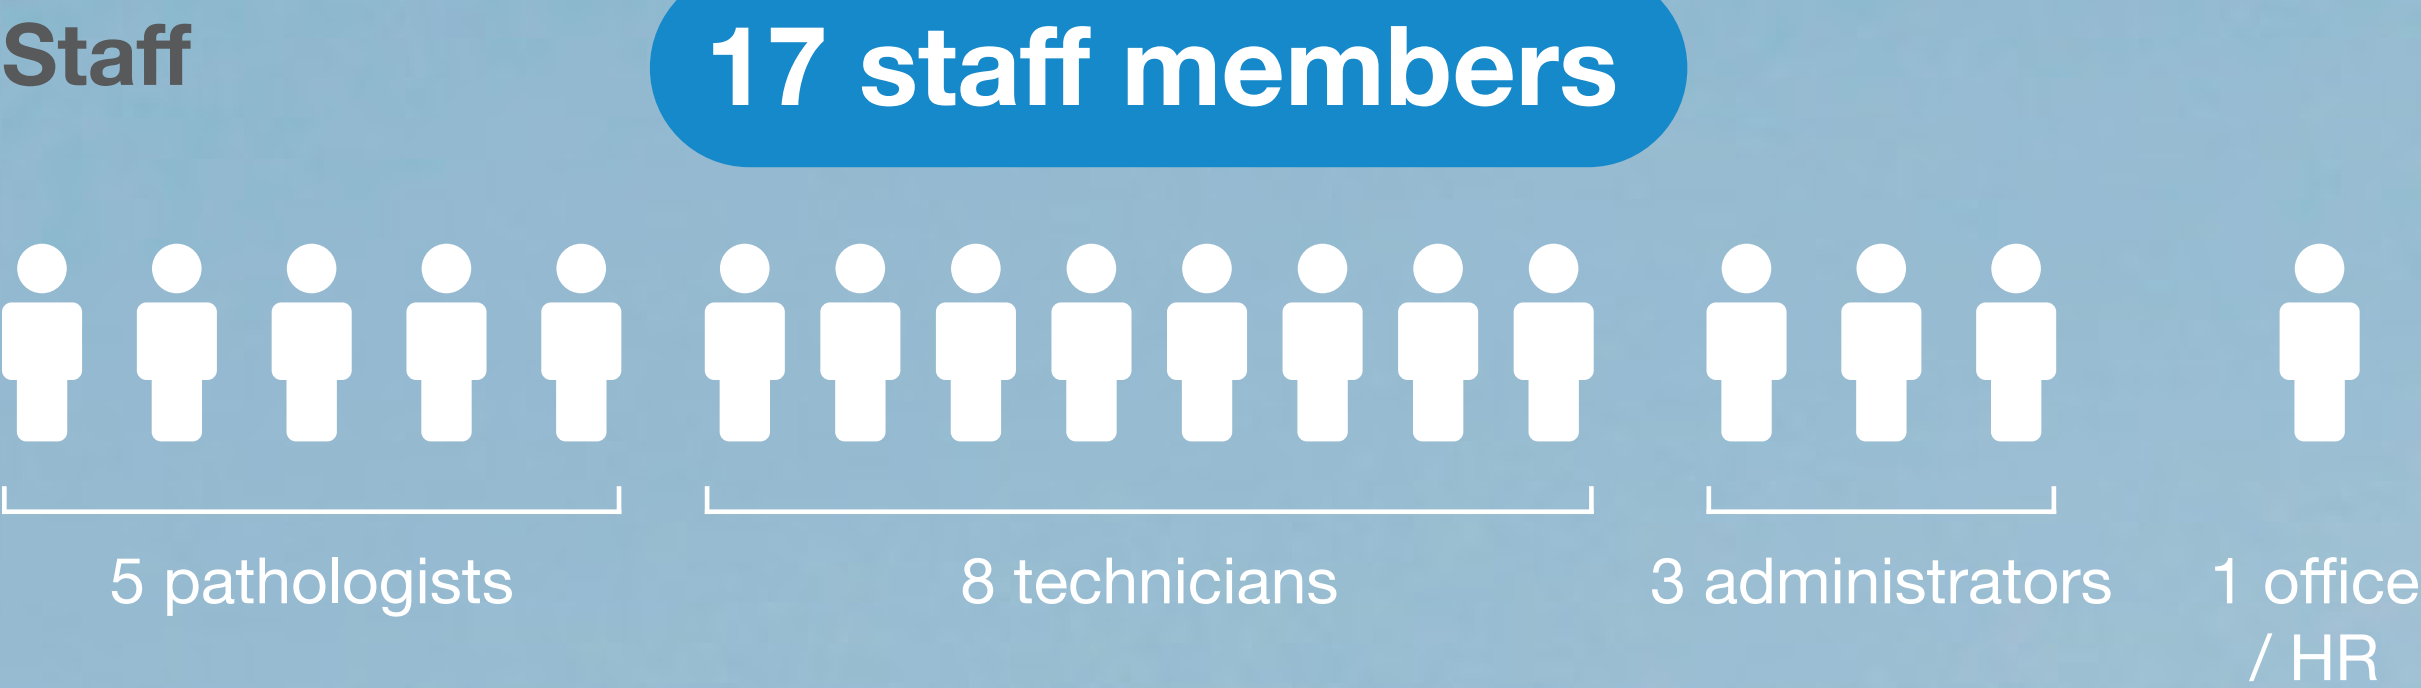

Technology

- 13 instruments used**
- 1 batch processor
 - 1 continuous processor
 - 1 automated transfer system
 - 1 automated embedding system
 - 1 manual embedding instrument
 - 3 semi-automated microtomes
 - 2 integrated staining and film coverslipping systems
 - 2 advanced staining systems
 - 1 slide scanner system

Staff

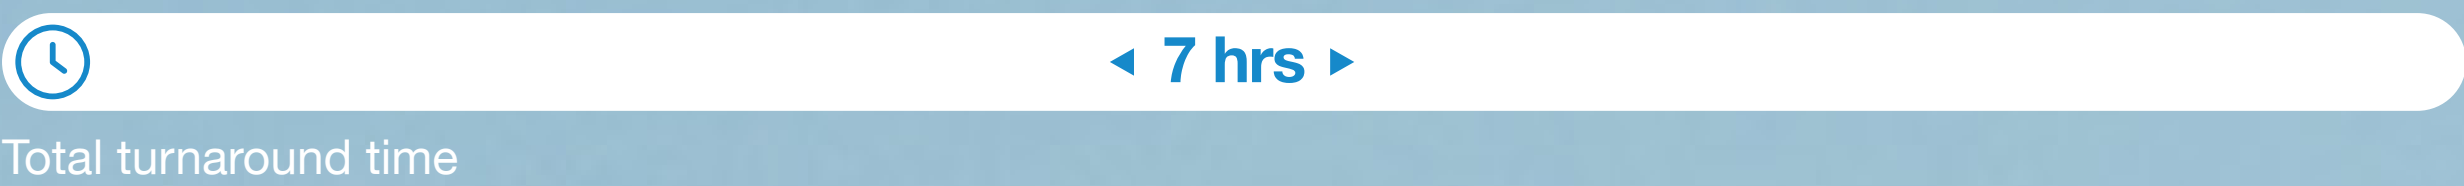

Duration

Technician time spent on one cassette

<1% rework

* fixed tissue ** for H&E stained slides
